

TarsiTree

Subtalar Spacer System

The TarsiTree implants are used to stabilize the subtalar joint during hyperpronation of the foot. For this purpose, the TarsiTree System offers two different design variants, which are combined in one system.

Conical design with cylindrical end and Wave Design. The wave design has a thread, which merges into a smooth, curved finish.

TarsiTree

Subtalar Spacer System

TarsiTree, wave-shaped

12.30100.xxxS

Size 5-10

TarsiTree, tapered

12.30200.xxxS

Size 5-10
